

TELE-ICU POWERED BY SOUND PHYSICIANS

We extend our deep experience building and managing comprehensive on-site ICUs to deliver complete Virtual Intensivist coverage.

There are numerous barriers to 24/7 intensivist coverage: a nationwide shortage of intensivists, inability to recruit to many locations across the U.S., and in-house coverage is cost prohibitive at sites with lower ICU volumes. All this stands in conflict with the mission to have board-certified critical care physicians driving the care of critically ill patients.

The answer may be telemedicine; however, not all virtual critical care providers are the same. You need a partner with the right mix of clinical leadership and technical expertise to deliver world-class Virtual Intensivist support. We extend our 20+ years of experience building and managing comprehensive on-site critical programs to the delivery of Tele-ICU services.

ELEVATING CRITICAL CARE

Sound Physicians has robust experience elevating the quality of care in ICUs across the country. Hospitals that leverage our on-site ICU programs support higher acuity cases while experiencing increased patient safety, higher throughput, reduced transfers, and improved patient experience scores.

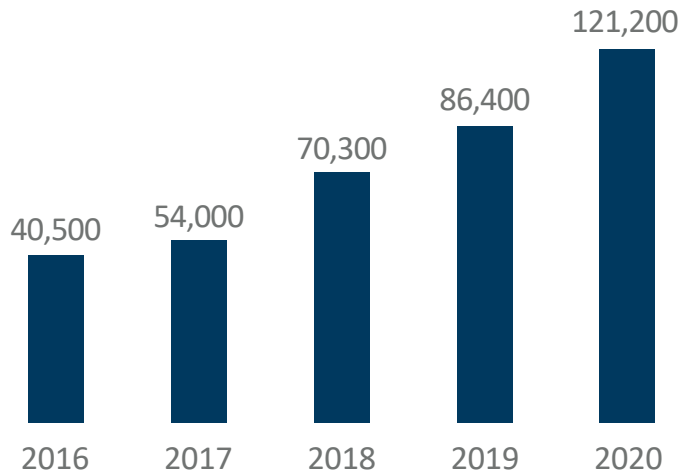

We employ more board-certified intensivists than any other physician practice in the country. Our clinicians share the collective knowledge of more than 120k annual patient encounters across 90+ programs each year to drive clinical performance. Advancements in technology have enabled us to bring our management rigor, board-certified intensivists, and evidence-based medicine to hospitals across the country through Sound's Tele-ICU services.

SOUND'S TELE-ICU PROGRAM IMPROVES:

- *ICU Length of Stay*
- *Ventilator Days*
- *Transfers Out*
- *Mortality Rate*

SOUND'S ANNUAL ICU PATIENT VOLUME

TELE-ICU THAT'S RIGHT FOR YOUR HOSPITAL

Sound Physicians recognizes the enormity of the clinical, financial, and operational barriers in today's hospitals. Combining Sound's critical care management expertise and a team of experienced clinicians with the right technology platform allows us to bring our Tele-ICU services to hospitals across the country.

Whether your on-site team needs regular or periodic intensivist support, Sound's responsive Tele-ICU model can flex to meet your needs.

CHALLENGE

SOLUTION

Small ICU unable to justify full-time intensivist

Initiate Tele-ICU session when support is required

Local intensivist/pulmonologist unable to cover ICU 24/7

Leverage Tele-ICU program for gap coverage

Inconsistent or volatile ICU census

Virtual Intensivist ready to provide clinical support during surges

Recruiting challenges with board certified intensivists

24/7/365 Tele-ICU coverage

In-house intensivists cost prohibitive

Advanced Practice Practitioner (APP) utilization with Virtual Intensivist oversight

Unable to supervise Resident/APP 24/7

Board certified Virtual Intensivist with 24/7 availability

Clinician burnout

Virtual Intensivist covers nights, weekends, holidays, and vacations

ICU with high locums utilization

Launch Tele-ICU sessions to avoid high costs
